```
genome polyprotein - Newcastle disease virus (strain Beaudette C)
H.Contains: RNA-directed RNA polymerase (EC 2.7.7.48)
C.Species: Newcastle disease virus
C.Species: Newcastle disease virus
C.Date: 31-Mar-1989 #sequence_revision 31-Mar-1989 #text_change 11-Jun-1999
C.Accession: A26747
R.Yusoff, K.; Millar, N.S.; Chambers, P.; Emmerson, P.T.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                  CSa C-terminal peptide analogues AAR89734-44 and AAR90033-35 may be used in a new method for identifying CSa agonists/antagonists. AAR89734 represents the generic formula of this newly defined class of labelled peptides. CSa antagonists identified using this method are useful in the treatment of a wide variety of CSa mediated diseases such as acute respiratory distress syndrome (ARDS), anaphylactic shock, psoriasis, osteoarthriis, rheumatoid arthritis, astima, cardiovascular disorders, and metastatic spread of cancerous tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 D2H; hPEPT1; human; GI tract receptor; sucrose-isomaltase complex; intestinal peptide-associated transporter; hypertension; diabetes; osteoporosis; haemophilia; anaemia; cancer; migraine; angina pectoris;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                  C5s receptor binding assays : used for identifying cpds.having C5a antagonist, agonist or partial agonist activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gastro-intestinal transport receptor; binding protein; hSI; HPTl;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        97US-0046595
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     04-MAY-1999 (first entry)
```

This sequence represents a peptide that specifically binds to the human D2H protein. The invention relates to putified proteins (I) that bind specifically to at least one of the gastro-intestinal (GI) tract receptors human intestinal peptide associated transporter (HPT1).

The following transport of therapeutic agents through human and animal GI tissue active transport of therapeutic agents through human and animal GI tissue (into the blood) for in vivo delivery, particularly for treatment or prevention of hypertension, diabetes, osteoporosis, haemophilia, anaemia, CC anner, migraine, or angina pectoris. Specifically they are used to deliver, insulin or leuprolide, but many other suitable therapeutic agents are disclosed, including genes or inhibitory nucleic acid, imaging agents and antiques. (I) may also provide targeting to the GI tract. Other uses CC of (I) arc: (i) to determine the level of specified receptors in a sample CC and antiques. (i) to determine the level of specified receptors in a sample CC Immunogenic analogues or derivatives of (I) are used to raise antibodies are used to locate, detect and mad in immunoassays. The antibodies are used to locate, detect and measure (I), e.g. for imaging, monitoring treatment, tissue analysis cute., also for peptide purification and immobilisation.

Claim 10; Page 40-41; 49pp; English.

The present sequence is a putative protein sequence of a corn lecitiniciolesterol acylicansferase (also known as phosphatidylcholine-storol Ocacylicansferase). This enzyme is found associated with high-density lipoproteins and Apolipoprotein-Al and -D. RESULT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel yeast G protein-coupled receptor,

CPR1 (AAY58355). GPR1 is predicted to have seven transmembrane domains,
which is characteristic of G protein-coupled receptors, and also
contains a very large third cytoplasmic loop and a large cytoplasmic

tail. The third cytoplasmic loop contains two short basic sequences: one
sequence (KRRRAQIO) is present at the N-terminal end of the loop and the
cytoplasmic loop also contains an asparagine-rich region. GPR1 is
believed to provide the upstream signal that activates GPA2, and plays
believed to provide the upstream signal that activates GPA2, and plays
an essential role in inducing the switch from non-filamentous to
illamentous growth in yeast. Modulators of GPR1 function, especially
inhibitors, are useful for prevention or treatment of a disease or
inscrted heterologous sequence inactivates the biological activity of

The invention relates to a novel yeast G protein-coupled receptor, CPRI (AAYS835). GPRI is predicted to have seven transmembrane domains, which is characteristic of G protein-coupled receptors, and also contains a very large third cytoplasmic loop and a large cytoplasmic copy contains two short basic sequences: one sequence (KRIKAOIG) is present at the N-terminal end of the loop and the cytoplasmic loop contains an apparagine-rich region. GPRI is believed to provide the upstream signal that activates GPA2, and plays an essential role in inducing the switch from non-filamentous to filamentous to filamentous are useful for prevention or treatment of a disease or filamentous growth in yeast. Modulators of GPRI function, especially inhibitors, are useful for prevention or treatment of a disease or disciplinational activity may be used to inhibit and activity of current and plays are included which modulate GPRI gene expression and/or gene product curvity may be used to inhibit the conversion of a fungus from a non-filamentous form to a filamentous sequence. Conversion of a fungus from a non-filamentous form to a filamentous down the presents a GPR mutant, d277-284, used in an exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     native GPRÍ.
Note: This sequence is not shown in the specification, but is derived
from the yeast GPRI amino acid sequence given in figure IA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SmaRest region) of the cytoplasmic C-terminal tail, relative to the
                                                                                                                                                                                                                                                                                                                                                       Yeast, G protein-coupled receptor, GPR1; filamentous growth; pseudohyphal form; signalling pathway; antifungal; mutant; mulein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the invention. The invention relates to a novel yeast G protein-coupled receptor, C CPRI (AAY$335). Great is predicted to have seven transmembrane domains, which is characteristic of G protein coupled receptors, and also contains a very large third cytoplasmic loop and a large cytoplasmic sequences; one tail. The third cytoplasmic loop contains two short basic sequences; one sequence (KRRAAOIG) is present at the N-terminal end of the loop and the other sequence (KRRAAOIG) is at the C-terminal end of the loop and the other sequence (KRRAAOIG) is at the C-terminal end of the loop. The third cytoplasmic loop also contains an asparagine-rich region. GPRI is believed to provide the upstream signal that activates GPA2, and plays an essential role in inducing the switch from non-filamentous to tilamentous growth in yeast. Modulalors of GPRI function, especially inhibitors, are useful for prevention or treatment of a disease or disorder involving a fungal infection. The inhibitor may be an anti-GPRI antibody, GPRI antisense nucleic acid or a GPRI gene altered so that an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                inserted heterologous sequence inactivates the biological activity of GPR1. Compounds which modulate GPR1 gene expression and/or gene product activity may be used to inhibit the conversion of a fungus from a non-tilamentous form to a fillamentous form. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: This sequence is not shown in the specification, but is derived from the yeast GPR1 amino acid sequence given in figure 1A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        to invention. This sequence is lacking the asparagine-rich region the third cytoplasmic loop, relative to the native GPR1.
                                                                                                                                                                                                                                                                                                                                                                                           Yeast; G protein-coupled receptor; GPR1; filamentous growth; pseudohyphal form: signalling pathway; antifungal; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   represents a GPR mutant, d277-284, used in an exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel protein, gene, antibody and recombinant cell useful for

The invention relates to a novel yeast G protein-coupled receptor,

"The invention relates to a novel yeast G protein-coupled receptors,

"The invention is characteristic of G protein-coupled receptors, and also
"Antal is characteristic of G protein-coupled receptors, and also
"Antal is characteristic of G protein-coupled receptors, and also
"Antal is characteristic loop contains two short basic sequences; one
sequence (RRIKAQIG) is present at the N-terminal end of the loop and the
"The third cytoplasmic loop also contains an apparagine-rich region. GPR is
"The couple of the upstream signal that activates GPA2, and plays
an essential role in inducing the switch from non-filamentous to
"Ilamentous frowth in yeast. Modulators of GPRI function, especially
Inhibitors, are useful for prevention or treatment of a disease or
"Isakerder involving a fungal infection. The inhibitor may be an anti-GPRI
cativity may be used to inhibit the conversion of a fungus from a
non-filamentous form to a filamentous form. The present sequence
"Secretary of a filamentous form to a non-filamentous form to a filamentous form. The present sequence
"Secretary invention. This sequence is lacking the first basic motif (KRIKAQIG)
"The third cytoplasmic loop, relative to the native GPRI
"Note: This squence is not shown in the specification, but is derived
"The trian and a squence given in figure lA."

GPR1 (AAV$8355). GPR1 is predicted to have seven transmembrane domains, which is characteristic of G protein-coupled receptors, and also contains a very large third cytoplasmic loop and a large cytoplasmic to the loop and a large cytoplasmic sequence (KKRKAOIG) is present at the N-terminal end of the loop and the other sequence (KKRRAOIG) is at the C-terminal end of the loop and the third cytoplasmic loop also contains an asparagine-rich region. GPR1 is believed to provide the upstream signal that activates GPA2, and plays an essential role in inducing the switch from non-filamentous to flamentous growth in yeast. Modulators of GPR1 function, especially inhibitors, are useful for prevention or treatment of a disease or disorder involving a tungal infection. The inhibitor may be an anti-GPR1 intended beterologous sequence inactivates the biological activity of GPR1 compounds which modulate GPR1 gene expression and/or gene product activity may be used to inhibit the conversion of a fungus from a non-filamentous form to a filamentous form to a filamentous form to a filamentous form to a filamentous form the second basic motification of the third cytoplasmic loop, relative to the native GPR1.

KKRRAOIO) of the third cytoplasmic loop, relative to the native GPR1.

Note: This sequence is not shown in the specification, but is derived from the yeast GPR1 amino acid sequence given in figure lA.

contains a very large third opposite according to the contains a very large third opposite according to the contains a very large third expopasmic loop contains two short basic sequences; one sequence (KKRRAQIG) is present at the N-terminal end of the loop and the other sequence (KKRRAQIG) is at the C-terminal end of the loop. The third extoplusmic loop also contains an asparagine-rich region. GPRI is believed to provide the upstream signal that activates GPA2, and plays an essential role in inducing the switch from non-filamentous to linamentous growth in yeast, Modulators of GPRI induction, especially inhibitors, are useful for prevention or treatment of a disease or disorder involving a fungal infection. The inhibitor may be an anti-GPRI
                                                                                                                                                                                                                                                                                                                                                                                antibody, GPR1 antisense nucleic acid or a GPR1 gene altered so that an inserted heterologous sequence inactivates the biological activity of GPR1. Compounds which modulate GPR1 gene expression and/or gene product activity may be used to inhibit the conversion of a fungus from a
                                                                                                                                                      This sequence represents a novel yeast G protein-coupled receptor, GPR1. GPR1 is predicted to have seven transmembrane domains, which is:characteristic of G protein-coupled receptors, and also

The natural route of infection is by the respiratory and/or gastrointestinal tract which are also the major
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      end of the genome of avian paramyxovirus allowing the generation of an infectious copy of avian paramyxovirus. The cell line is useful for with production of infectious lentogenic NDV (Newcastle Disease virus) without the addition of exogenous proteolytic activity. Also it is possible to generate a stable transfected cell line that expresses the wild-type F protein in the virus envelope therefore providing infectious particles, useful in the form of a vaccine, especially against respiratory and/or gastrointestinal diseases. NDV can be easily cultured to very high titers in embryonated eggs. Mass culture of embryonated eggs is relatively cheap. NDV vaccines are relatively stable and can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New avian paramyxovirus cDNA, useful for production of vaccine against Newcastle disease virus
                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel avian-paramyxovirus cDNA (I) which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               terminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  infection; lentogenic; F protein; vaccine;
gastrointestinal disease; poultry pathogen;

routes of infection of many other poultry pathogens. NDV can induce local immunity despite the presence of circulating maternal antibody. This sequence represents a protein encoded by the NDV strain LaSota genome which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAC97991 to AAC98763 encode the human colon cancer associated proteins, called human colon cancer antiqens, given in AAB53234 to AAB54006. The human colon cancer antiqens can have cytostatic, cardioactive, muscular; neuroprotective, immunomodulatory, gynaecological, gastrointestinal, vulnerary, nephrotropic, antiinfective and antibacterial activities, and can be used in gene therapy. The colon cancer antigen polynucleotides, proteins and antibodies to the proteins are useful for the prevention, treatment, and diagnosis of colon disorders, such as colon cancer. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             system disorders, muscular disorders, reproductive disorders, qastrointecstimal disorders, wounds, renal disorders, infectious diseases, and cardiovascular disorders. AAC99764 to AAC99772 and AAB54007 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Colon cancer associated gene sequences, referred to as colon cancer antiqens, useful for the treatment, prevention, and diagnosis of colon disorders such as colon cancer.

The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the casection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cCNAs easily without any specialised methods. AAH03166 to AAH1368 and AAH13633 to AAH1342 represent human cDNA sequences; AAB92446 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes primer sets for synthesising 5602 [ii]. Length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the specification. The primer sets can be used in antisense therapy and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Frimer sets for synthesizing polynucleotides, particularly the 5602 fuil-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the 5'-end sequence/3'-end sequence is selected from those defined in

genome polyprotein - Newcastle disease virus (strain Beaudette C)
N;Contains: RNA-directed RNA polymerase (EC 2.7.7.48)
C;Species: Newcastle disease virus
C;Date: 31-Mar-1969 #sequence_revision 31-Mar-1989 #text_change 11-Jun-1999
C;Accession: A2647
R;Yusoff, K.; Miliar, N.S.; Chambers, P.; Emmerson, P.T.
M:Clock Rock Res: 15, 3961-3976, 1987
A:Title: Nucleotide sequence analysis of the L gene of Newcastle disease virus; homol A:Reference number: A3665; MUID:87230982
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            R)Seeger, K.: Harris, D.: James, K.D.: Parkhill, J.: Barrell, B.G.: Rajandream, M.A. submitted to the EMBL Data Library, July 1999
